SYSTEM AND METHOD FOR MERGING WEB BASED ON-DEMAND SNA APPLICATION SELECTION AND TN3270 CLIENT LAUNCHING

Abstract

The present invention relates to the transmission of Systems Network Architecture (SNA) information through the Internet Protocol (IP) network, and more particularly to a method and system for an SNA application user to locally select a target application at its current location and to launch a preferred (or the more appropriate) Telnet 3270 Client to access this target application in a one-step process.
